

## ABSTRACT

The invention relates to particles containing at least  
5 one active principle, which is preferably water-  
soluble, containing one or more aromatic, carbocyclic  
or heterocyclic, monocyclic or fused polycyclic groups,  
with a molecular weight of less than or equal to 1000,  
and at least one synthetic polymer containing aryl  
10 groups with a glass transition temperature ( $T_g$ ) of  
greater than or equal to 45, to processes for preparing  
such particles and to compositions containing them.
